Brainstorming & Ideation Phase

Problem Statement

Professionals and students attending networking events often find it difficult to initiate meaningful conversations with new people. Many struggle to identify appropriate discussion topics that align with the event context and their interests, resulting in missed networking opportunities. Additionally, participants may encounter claims or information during discussions that they wish to verify quickly. Existing solutions provide generic conversation suggestions but lack personalization and integrated fact verification.

Proposed Solution

The proposed solution is an AI-powered Personalized Networking Assistant that generates professional conversation starters based on the event description and the user's interests. DistilBERT performs zero-shot classification to identify relevant event themes, while Gemini generates personalized and engaging conversation starters. A Wikipedia-based fact-checking module enables users to verify information discussed during networking sessions. The application also maintains conversation history and user feedback to improve the overall user experience.

Primary Users

- Students attending technical workshops, seminars, and career fairs.

- Professionals participating in conferences, networking events, and industry meetups.
 - Job seekers looking to initiate conversations with recruiters and industry experts.
 - Researchers and entrepreneurs attending innovation and startup events.
-

Secondary Users

- Event organizers who wish to provide networking assistance to attendees.
 - Universities conducting placement drives and career guidance sessions.
 - Corporate training organizations facilitating professional networking.
 - Community groups hosting technical and knowledge-sharing meetups.
-

Technology Stack

Layer	Technology
Frontend	Streamlit
Backend	FastAPI
Programming Language	Python
Theme Extraction	DistilBERT Zero-Shot Classification
Conversation Generation	Gemini 2.5 Flash
Fact Checking	Wikipedia API
Data Persistence	JSON (history.json , feedback.json)
API Testing	Pytest, FastAPI TestClient
HTTP Requests	Requests Library
Configuration Management	Python Dotenv
